#### Characteristics

- > Symmetrical visible areas
- > Decorative
- > Protecting
- > High strength (Stainless Steel)

#### Description

BLANKE CUBELINE is a decorative profile with which tile coverings can be installed in a very decorative way. Additionally to the attraction Blanke•CUBELINE also protects the coverings in the edge areas. The visible surfaces are isosceles. Corner pieces (inner- and outer corners) are completing the assortment.

#### Application area

BLANKE CUBELINE can be installed as an edge profile, also at trays and reveals. It can be used also as an edge profile at socles. The product made of Stainless Steel can also be installed at stairs.

#### Working instructions

BLANKE CUBELINE with triangular punched attachment leg to be pushed in the fresh mortar bed and to be adjusted. The tiles closed to the profile to be pushed in strongly and to be adjusted in the way that the upper edge of the profile is one with the tile. In the profile area the tiles need to be layed without nay hollow spaces. To the tile a gap with a width of appr. 1,0 to 1,5 mm needs to be done. The gap space completely to be filled with gap mortar. While cleaning the Stainless steel do not use steel wool or steel brushes, because external rust can be built. Cleaning agents need to be free from hydrochlorid acid and chlorine.

Aluminium profiles: After putting them into the mortar or glue, profiles directly need to be cleaned from remaining mortar or glue. Also any waste material needs to be cleaned away, as otherwise building of spots may appear.
